YouTube Data Analysis

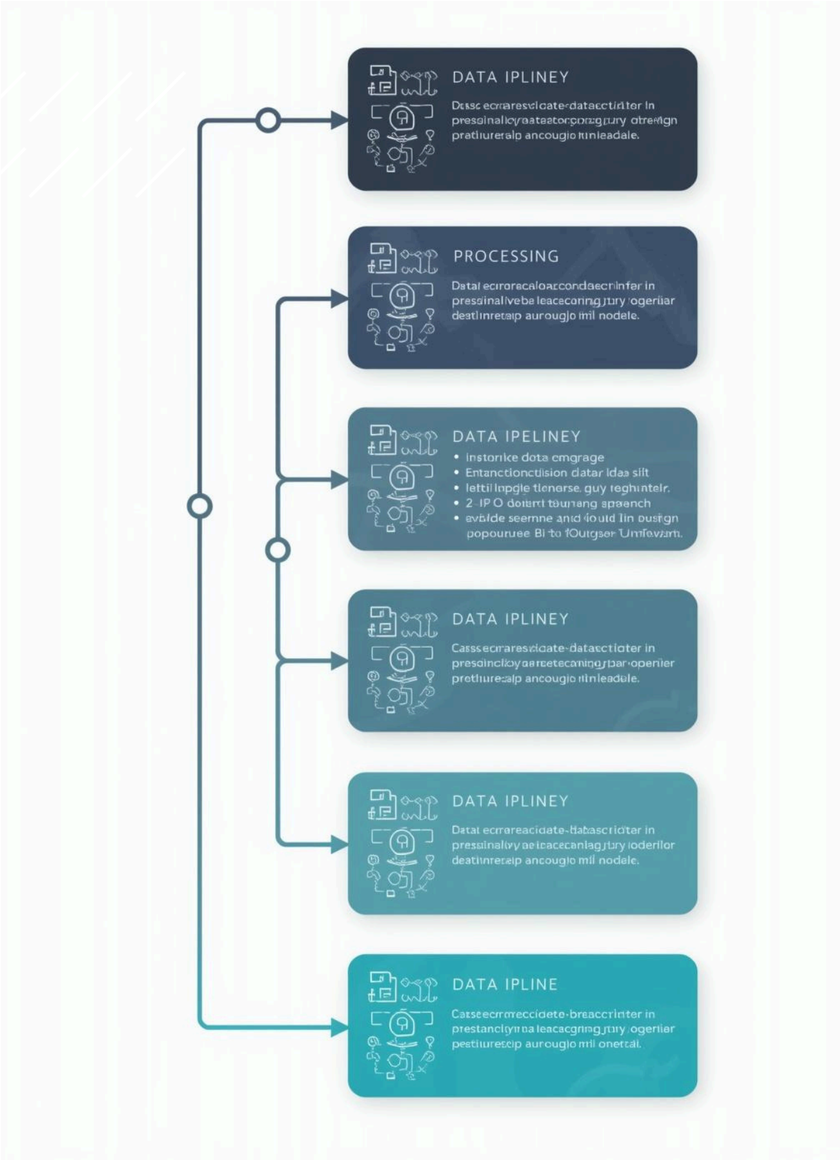
Tamil Nadu Assembly Election 2026 – Public Sentiment & Political Discourse Analysis

PRESENTED BY : MAHESWARAN R M

METHODOLOGY

Data Source: YouTube Data API
Query: "Tamil Nadu Assembly"
Data Collected: Top 100 videos, video metadata, thousands of comments
Processing Steps:

- Extraction – Gathering raw data from API
- Cleaning – Removing URLs, emojis, noise
- Feature Engineering – Creating analytical variables
- Mention Detection – Identifying party and leader references
- Sentiment Analysis – Classifying public opinion



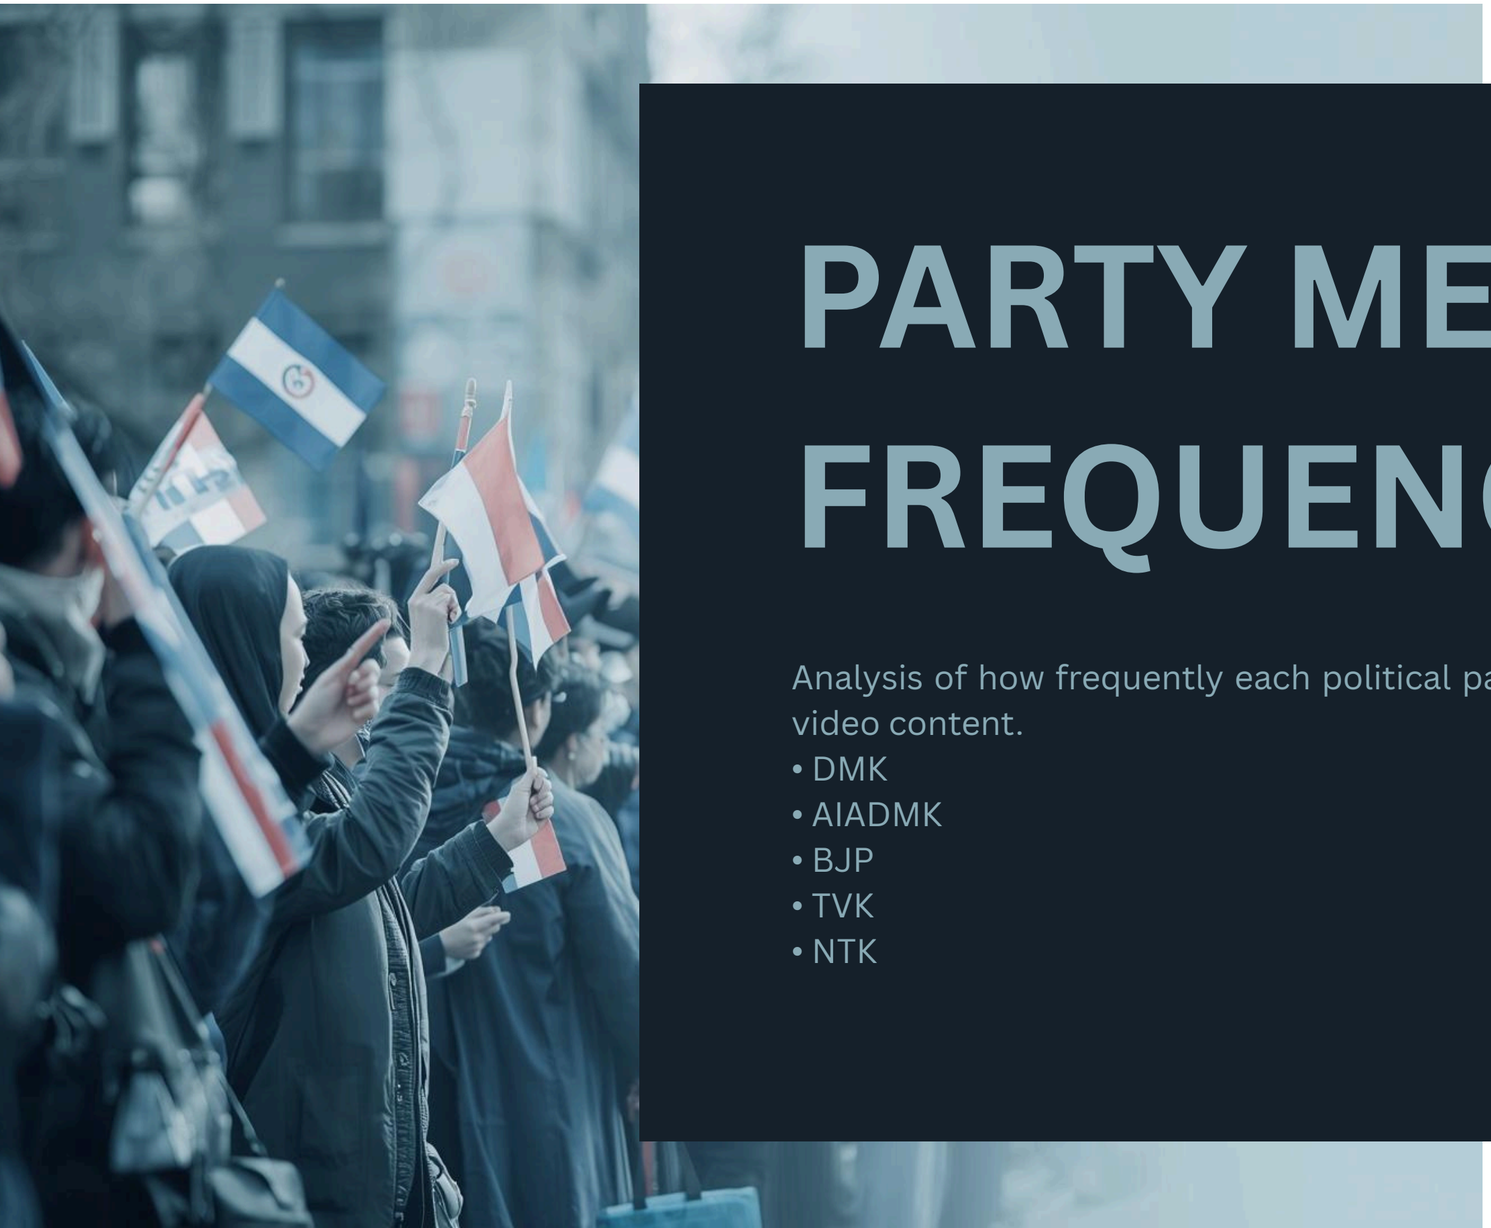
DATA PIPELINE

The data flows through a structured pipeline:
→ YouTube API: Extract video metadata and comments
→ Raw Data: Collect top 100 videos and thousands of comments
→ Cleaning: Remove URLs, emojis, and noise
→ Feature Engineering: Detect mentions, extract keywords
→ Analysis: Apply sentiment classification
→ Insights: Generate actionable findings

TOP TOPICS AND TRENDS

Key trending themes in Tamil Nadu election discourse:

- Governance and policy discussions
- Leadership comparisons and debates
- Party alliance speculations
- Economic development priorities
- Youth engagement in politics



PARTY MENTION FREQUENCY

Analysis of how frequently each political party is mentioned across YouTube comments and video content.

- DMK
- AIADMK
- BJP
- TVK
- NTK

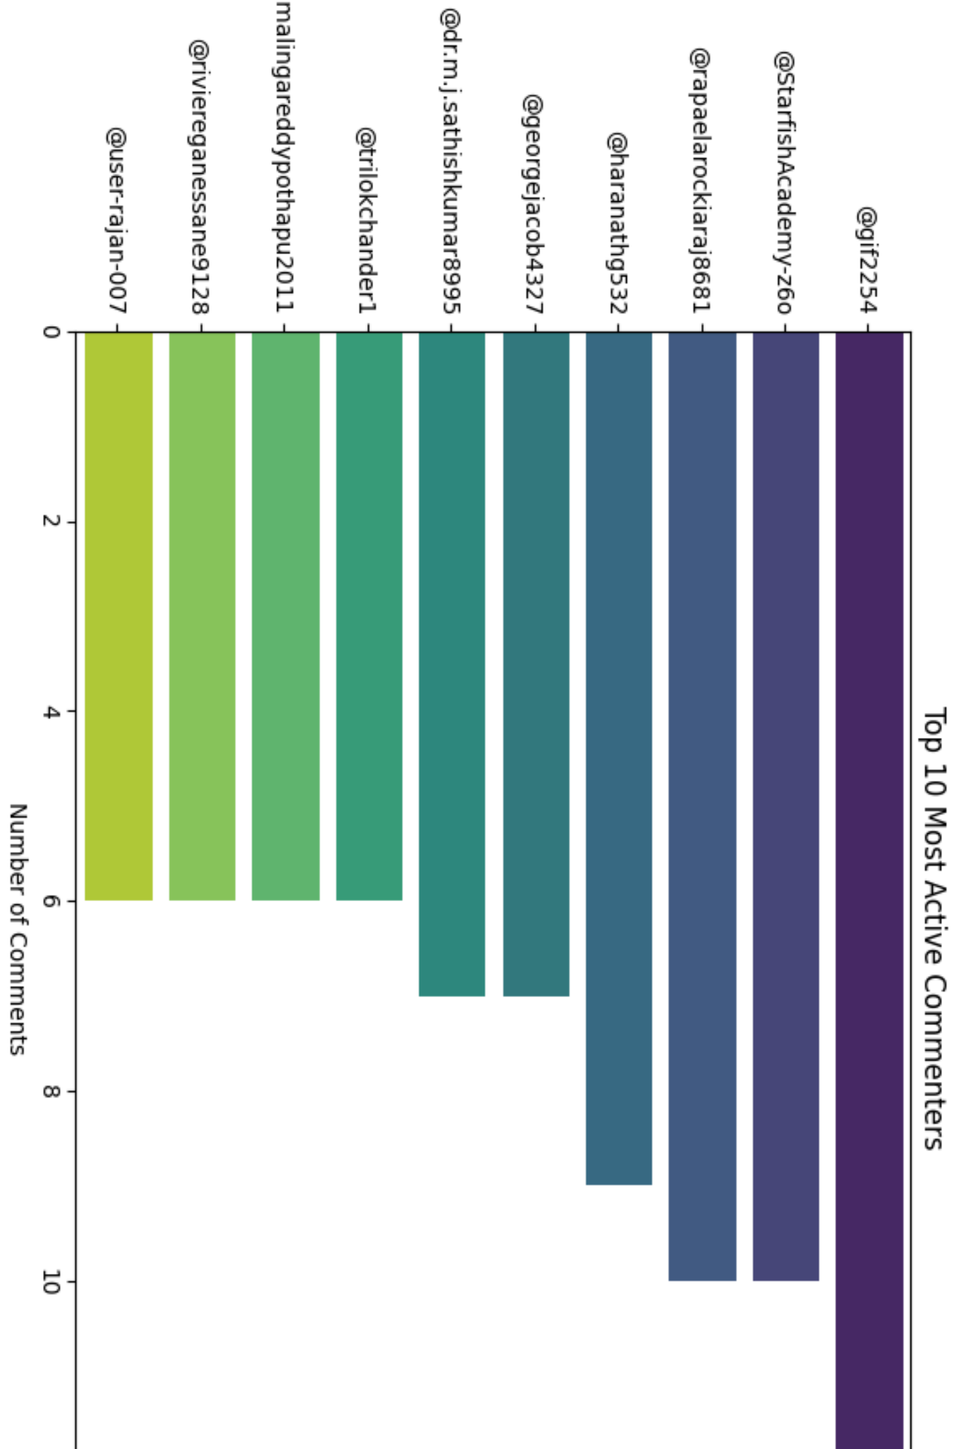
LEADER MENTION FREQUENCY

Analysis of how frequently key political leaders are mentioned across YouTube comments and video content.

- Stalin – DMK Chief Minister
- EPS – AIADMK Leader
- Annamalai – BJP State President
- Vijay – TVK Founder
- Seeman – NTK Leader

The Grahp:

Top 10 Most Active Commenters visualization shows engagement patterns and discourse participation levels.



SENTIMENT ANALYSIS OVERVIEW

Sentiment classification categorizes public opinion into three key groups: Positive (supportive, optimistic comments), Negative (critical, opposing views), and Neutral (factual, balanced statements). This analysis reveals the emotional tone of YouTube discourse around Tamil Nadu Assembly Election 2026.

PARTY VS SENTIMENT ANALYSIS

Comparison of sentiment distribution across political parties reveals distinct patterns in public perception.

- DMK shows balanced sentiment with strong positive engagement
- AIADMK receives mixed reactions across discussions
- BJP generates polarized sentiment responses
- TVK and NTK show emerging positive traction

KEY INSIGHTS

DMK emerges as the most discussed party across YouTube comments and video content. Overall sentiment trends show a mix of support and criticism, with neutral comments dominating. Emerging parties like TVK and NTK are gaining significant traction among younger audiences. Leader popularity patterns reveal Stalin and Vijay driving the highest engagement rates.

POLITICAL DISCOURSE INSIGHTS

Public reactions reveal a complex landscape of support and criticism across political parties. Key focus areas in discourse include governance effectiveness, leadership qualities, and economic policies.

Engagement Patterns:

- Discussion spikes around major political announcements
- Higher engagement on controversial topics
- Deep comment threads on leadership comparisons

Focus Topics: Governance, Leadership, Economy

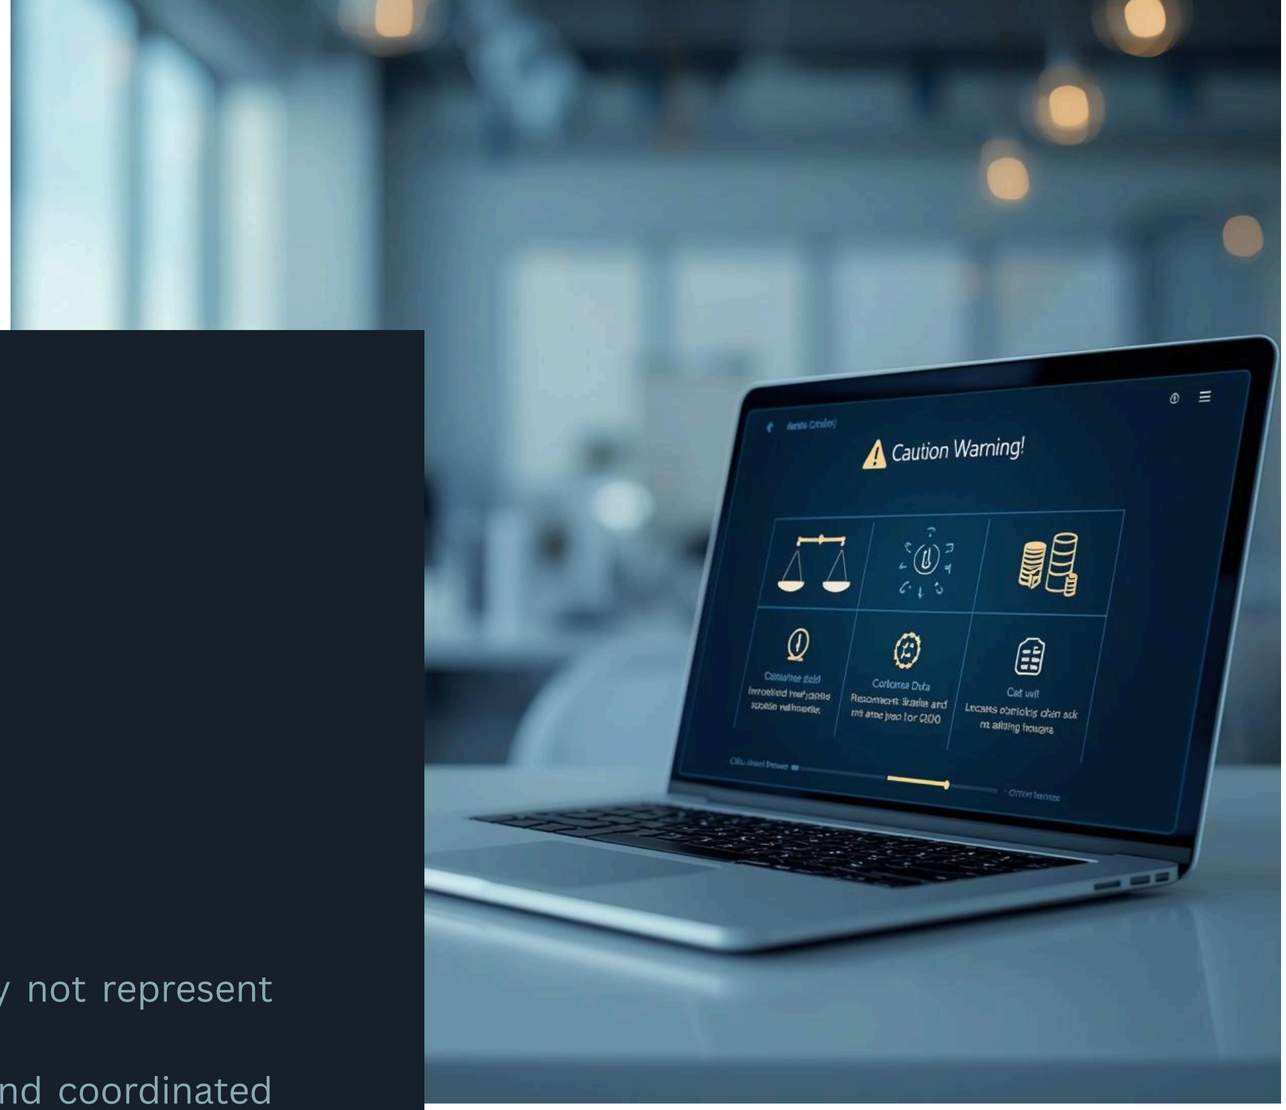
RISK & TREND ANALYSIS

- Concentration of Negative Sentiment: Certain parties and leaders attract disproportionately high criticism, indicating potential reputation risks.
- Controversial Topics Driving Engagement: Discussions around governance failures, corruption allegations, and leadership changes generate significant viewer interaction.
- Emerging Trends for 2026: Rising mentions of newer parties (TVK, NTK) suggest shifting political dynamics. Youth engagement patterns show increased political awareness.

CONCLUSION

YouTube serves as a valuable platform for analyzing public opinion and political discourse. This data-driven analysis reveals key sentiment patterns surrounding the Tamil Nadu Assembly Election 2026. The project demonstrates how social media analytics can provide actionable insights into voter sentiment, party perception, and leader popularity trends.

LIMITATIONS



This analysis acknowledges several constraints:

- Social media data bias – YouTube comments may not represent the broader Tamil Nadu electorate
- Spam and bot presence – Automated accounts and coordinated campaigns may skew sentiment results
- Tamil language sentiment detection – Current NLP tools have limited accuracy for Tamil text analysis and code-mixed content
